

LOST EMPERORS AND FOUND DATA

OpenAtlas in Byzantine Research

OpenAtlas is an open-source research database for managing, linking, and analyzing historical, prosopographical, and archaeological data. Built on the CIDOC CRM ontology, it supports structured data collection, collaborative research, and the online publication of interconnected research data.

WHY OPENATLAS?

- Collect structured research data
- Connect people, places, events, and sources
- Analyse networks and spatial relationships
- Collaborate within research teams
- Publish FAIR and interoperable datasets
- Reuse data across projects

FEATURE RICH

- Fully customizable type system
- Mapping uncertainty in space and time
- Interactive map
- Network visualization
- Annotation of texts and images
- Easy-to-use interface

VISUALIZE YOUR DATA

- Use **OpenAtlas Discovery** our presentation site template & connect it via our API
- Configurable with an integrated Content Management System (CMS)
- Data Table — Search, filter & explore the data
- Map — Visualize movement, areas & add icons
- Network — Explore connections & relationships
